Solarvista™

Field Service Management Software That Adapts

One platform for field service operations, built to shape itself around the way your business actually works.

What Solarvista Does

Designed for touch and mouse

A complete field service management system

Solarvista brings everything a field service business needs into one system: the customers and equipment you look after, the work you plan, and the billing that follows once it's done. It runs on the web and on phones, tablets and laptops, so your office and your field teams are always working from the same information.

Store everything you need to run the operation: customers, sites, equipment, pricing, contracts, service levels and skills, all in one place.

Plan work using a calendar built for field teams, viewable by day, week, month or timeline, with jobs assigned by drag and drop.

Bill automatically as invoices are calculated in real time from your own rules, whether that's a one-off job or a recurring service agreement.

Built for the way your teams already work

Maintenance and repair teams: schedule, dispatch and track jobs from the first call through to a completed fix, with real-time status updates the moment something changes.

Installation and project teams: manage multi-stage work in the same system, from initial survey through to final sign-off, without switching tools partway through.

Compliance and inspection teams: replace paper checklists and audits with digital forms that prompt for the right information and flag issues automatically.

Service and account teams: capture routine visits, satisfaction and feedback as part of the everyday workflow, so nothing falls through the cracks between jobs.

Capabilities

Solarvista's toolkit covers the full lifecycle of a job, from first booking to final invoice, and it's all built to work together rather than as fifteen disconnected features. Here's how it breaks down:

Scheduling, Dispatch & Mobile Workforce: Plan work on an intuitive multi-user calendar, then assign it with a simple drag and drop, with Solarvista suggesting the best-fit operative for each job. Once assigned, work reaches the field instantly through mobile apps built for phones, tablets and laptops, so operatives always know what's next and customers get realtime updates on status.

Costing, Billing & Agreements: Every job's true cost, and the charge it generates, is calculated automatically in real time and ready to invoice or collect payment on immediately. Service contracts and SLAs are managed the same way, across multiple sites and equipment, and billing data flows straight through to your existing accounts system, so nothing needs re-keying.

Forms, Data & Compliance: Replace paper forms and email trails with a digital forms designer that captures the right information first time, on mobile or tablet. That data sits alongside the customer and asset records you already hold, so nothing is duplicated, and automated alerts flag issues to the right person the moment something needs attention.

Parts, Inventory & Quoting: Track parts and materials from order to use, with full visibility of stock, movements and requests. Quotes can be built the same way, on a tablet or in the field, and once accepted, convert straight into planned work and billing, with no re-entry required.

Insight & Connectivity: Every workflow captures just enough data to feed real business intelligence, and that data moves automatically to and from the other systems you already rely on, no manual exports required. Customers get their own secure portal too, so they can check progress or pull information themselves, without needing to call.

The No-Code Difference

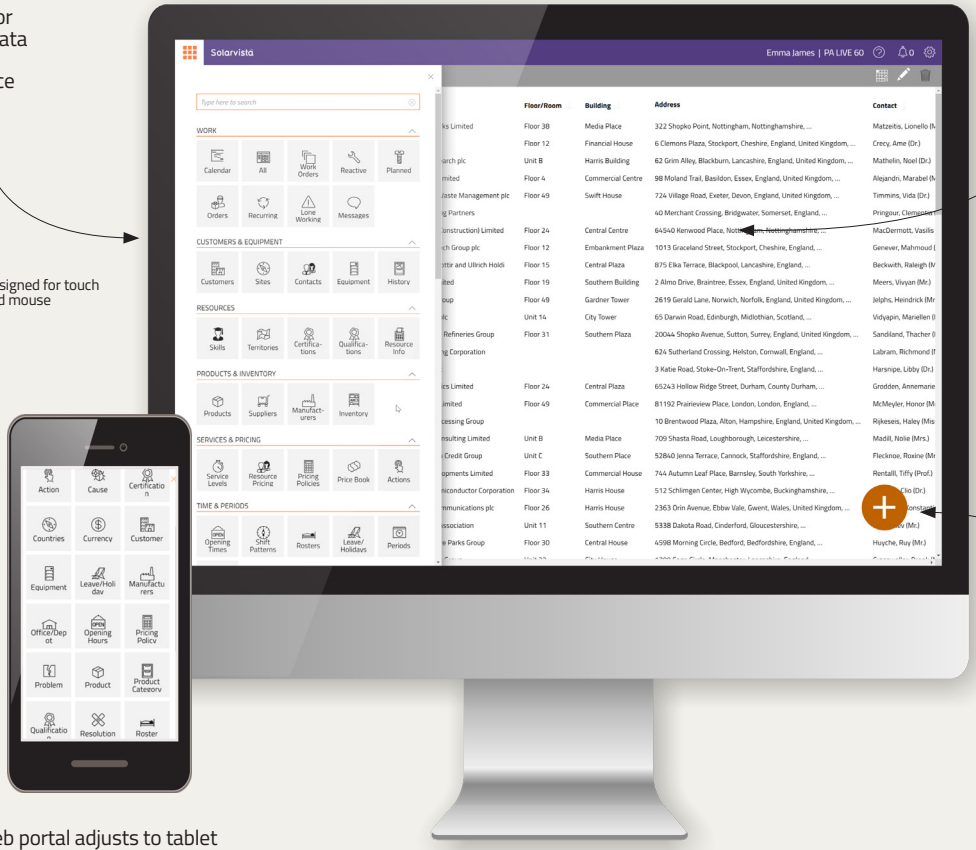

Example content shown. Menues and data views will show with your specific design & configured facilities.

Design menus for access to your data including work items,data source and calendars.

Define your own data sources with named views and columns.

Designed for touch and mouse

Items you design automatically appear on a slide menu when the floating plus button is pressed.

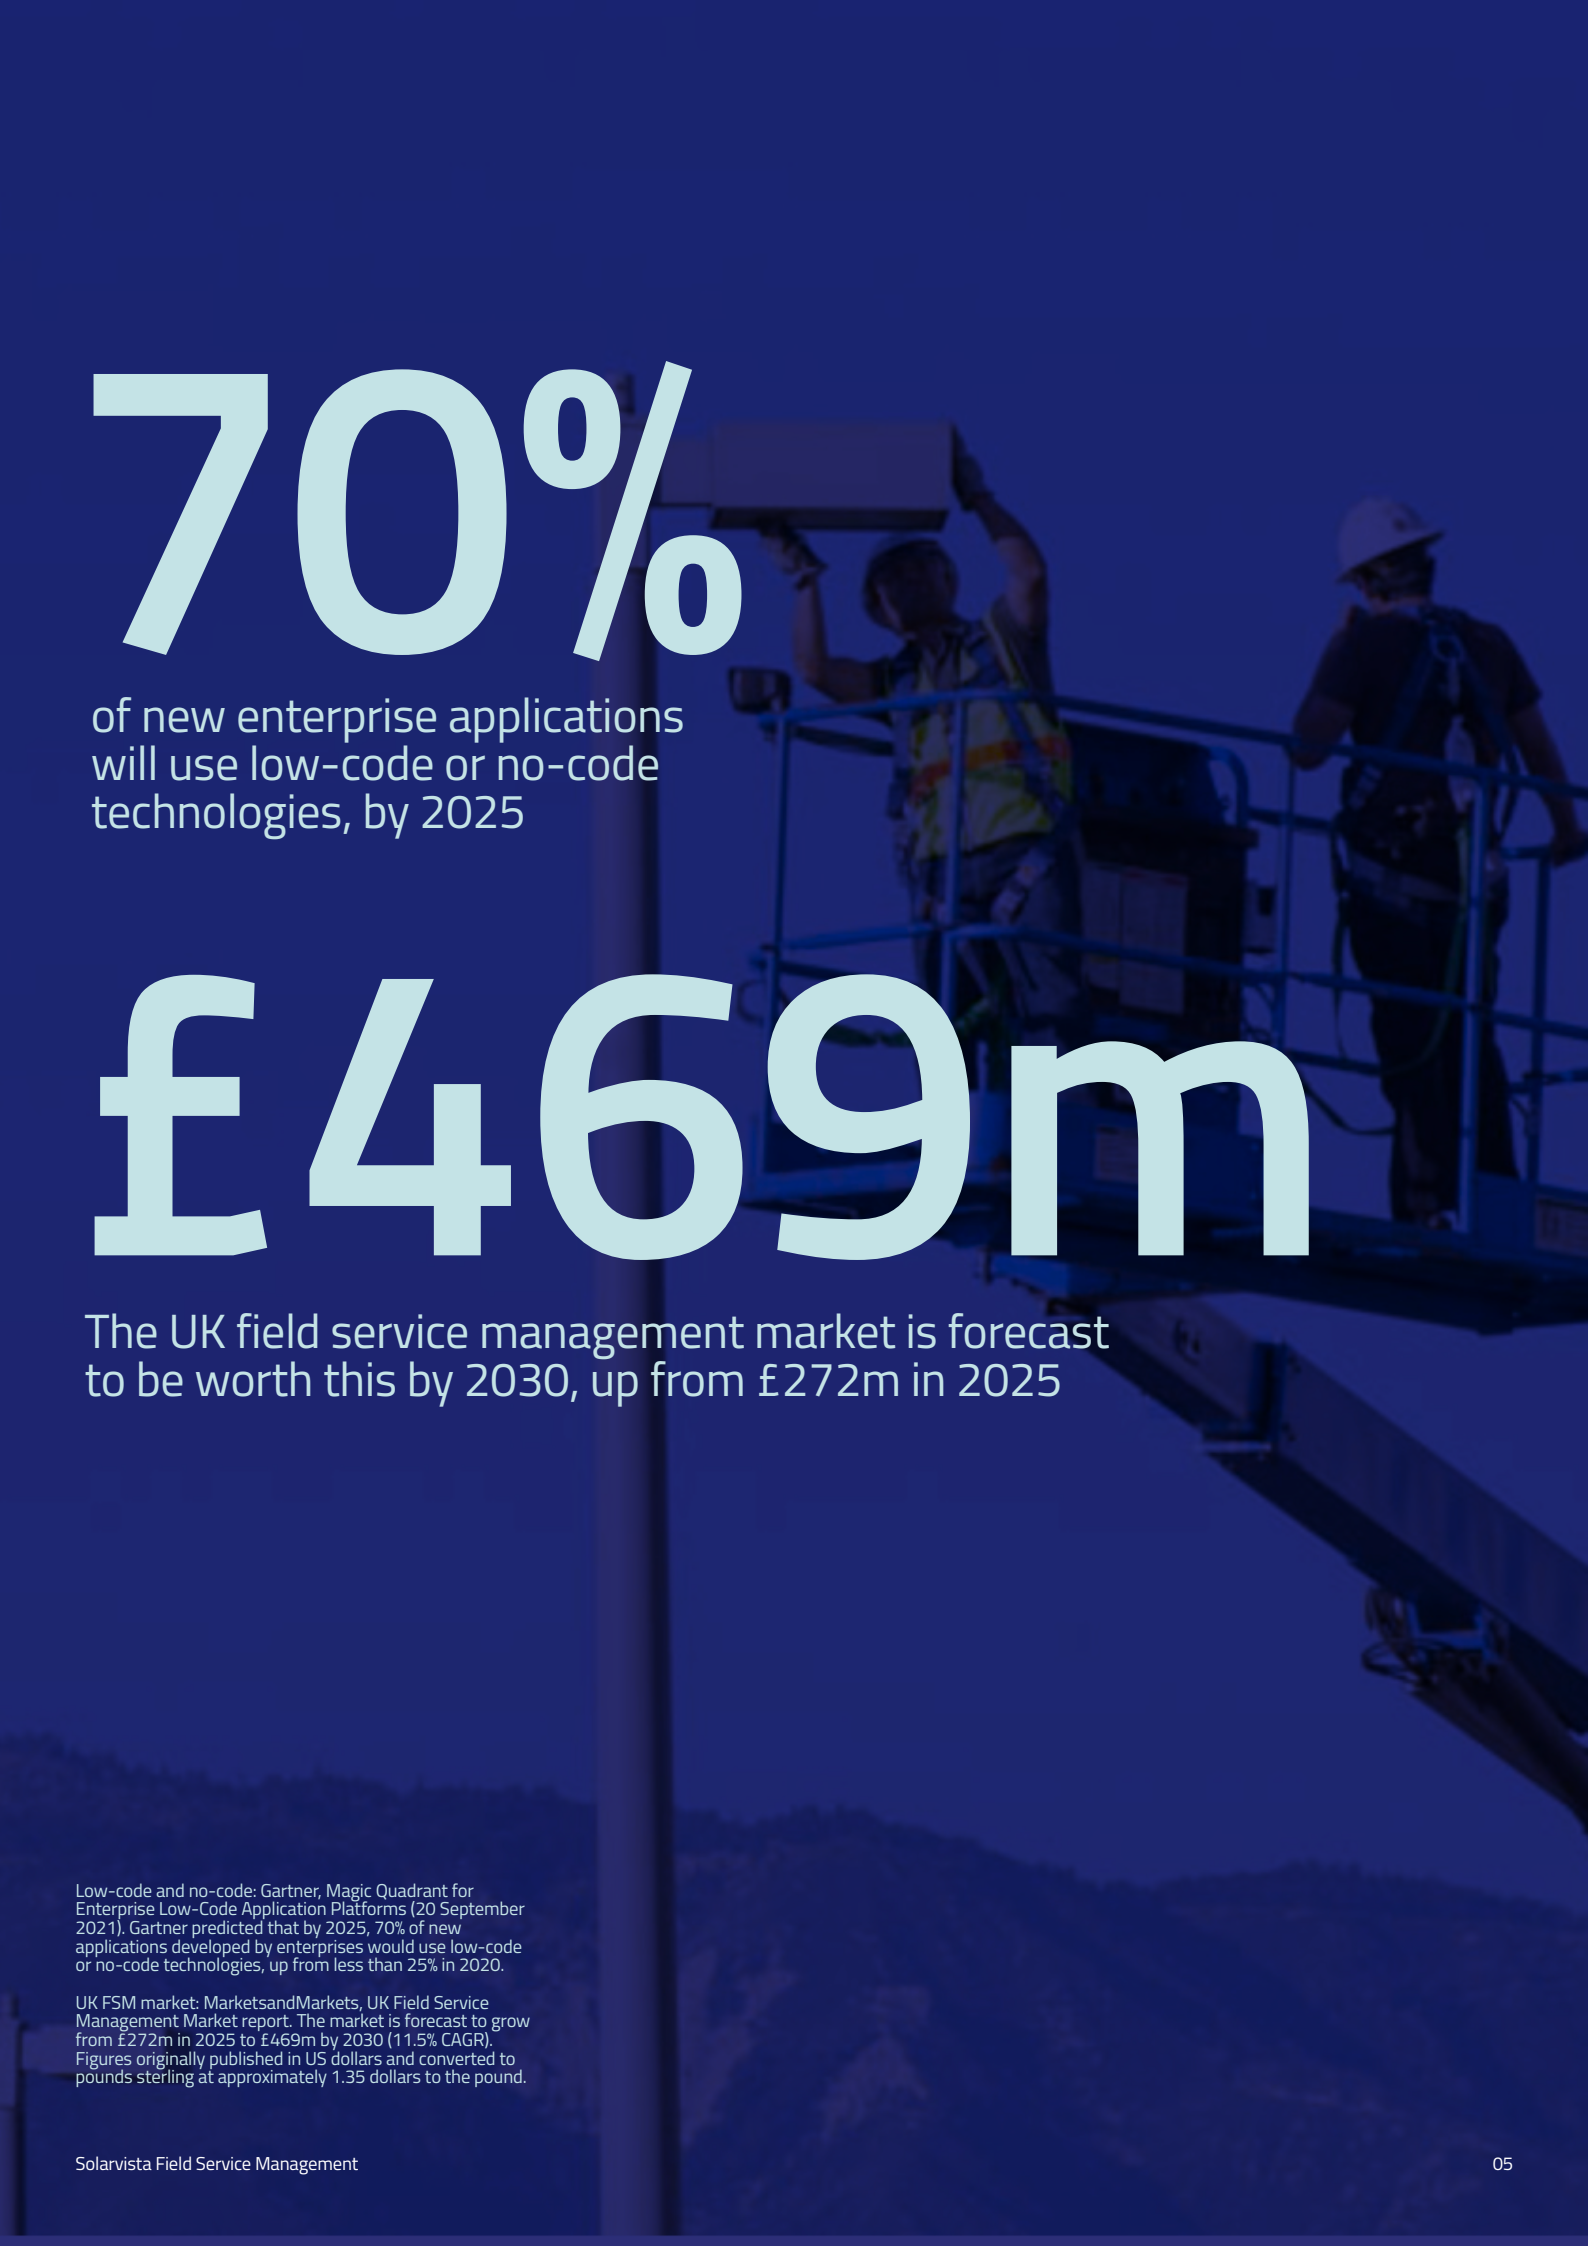

Web portal adjusts to tablet or smartphone use, if required.

Run your operations from one platform, and shape it around your business as you go

Solarvista combines ready-made field service tools with flexible, no-code configuration, so you're never stuck waiting on a developer to make it fit.

Every business runs field service a little differently, and Solarvista is built to bend to that rather than the other way around. Configure your own workflows, forms and data using simple, non-technical tools, then publish changes instantly to the web portal and mobile apps, no coding and no waiting on a developer. It works offline as well as online, so field teams keep working even without signal, and everything syncs the moment they're back in range.

It's the same technology already behind every ready-made feature in Solarvista, which is why setup is fast and changes later don't mean starting again.

70%

of new enterprise applications will use low-code or no-code technologies, by 2025

£469m

The UK field service management market is forecast to be worth this by 2030, up from £272m in 2025

Low-code and no-code: Gartner, Magic Quadrant for Enterprise Low-Code Application Platforms (20 September 2021). Gartner predicted that by 2025, 70% of new applications developed by enterprises would use low-code or no-code technologies, up from less than 25% in 2020.

UK FSM market: MarketsandMarkets, UK Field Service Management Market report. The market is forecast to grow from £272m in 2025 to £469m by 2030 (11.5% CAGR). Figures originally published in US dollars and converted to pounds sterling at approximately 1.35 dollars to the pound.

Proof

Trusted by field service and operations teams across the UK

"With Solarvista, I now have an agile business that gets more done at lower cost. I can customise quickly and my operatives can use apps for their own devices, installed easily from public app stores." **Service Operations Director**
